CULTURAL AID FOR LINING OUT STOCK

ALL BARE ROOT and the following potted material should be planted in beds provided with lath or other suitable shading. Andromeda, Azalea, Gordonia, Leucothoe, Ilex, Magnolia, Berberis, Cotoneaster, etc.

FOR ACID LOVING PLANTS, soil in beds should be enriched with acid leaf mold and decomposed cow manure. Other stock will be greatly aided by aged manure. Peat Moss and screened sand, incorporated with heavy soil, will encourage good root action.

ALL POTTED PLANTS such as Chamaecyparis, Juniperus, Taxus, Thuja, etc. may be lined out in Spring and Early Summer in previously prepared fields.

WATERING is important unless planting coincides with a natural rainfall. A good watering at time of planting is advisable, if at all possible. This is to be followed by one or two waterings. During June and July, the beds should be watered but the watering should be tapered off during the latter part of August to prevent late soft growth.

CULTIVATING during summer months is advisable and will be of great help where water is not available.

FEEDING with well rotted manure, as previously stated, should be done at planting time. No stimulant should be applied the first year. If used later, apply early enough to allow growth to harden before frost.

WINTER PROTECTION. Most of the plants will not need shade during late summer, but replacing shading on the beds for winter months is advisable if at all possible.

MULCHING is advisable to prevent heaving and winter injury. Oats broadcasted in September, will form a good mulch in regions where oats winter kills. Oats also check annual grass and chickweed.

TERMS

PRICES: F.O.B. Westbury, N. Y.

PACKING: At cost.

SHIPPING: To destination at cost and risk of purchaser. Mode—at sellers discretion unless otherwise instructed.

CERTIFICATE: By USDA furnished.

CONDITIONS: As per our current terms, copy of which will accompany each order and be a part thereof.
